

SPECIFICATION

TITLE: AUXILIARY EYEWEAR ATTACHMENT METHODS AND APPARATUS

This Application is a con of 10/353,628 01/28/2003 PAT 6,705,722 which is a con of

BACKGROUND OF THE INVENTION 09/184,694 11/02/1998 PAT 6,550,913

1. Field of the Invention

This invention relates to auxiliary eyewear attachment methods and apparatus, such as clip-on eyewear, and more particular relates to an auxiliary eye wear for attaching auxiliary sunglasses to conventional eyeglasses.

2. Background Information

Auxiliary eyewear to convert conventional eyeglasses to sunglasses are very popular. They allow the user to usually avoid the need for two separate prescription lenses. They can also be used, but less frequently, to attach auxiliary eyewear that can change the prescription of lenses. The more common use, however, is to add tinted lenses to conventional eyeglasses.

A number of different designs are available for auxiliary eyewear including clip-on eyewear, as well as auxiliary eyewear attachment using magnets. One method of attaching auxiliary eyewear is by clips. A method of attaching auxiliary eyewear by clips is shown and described in U.S. Application No. 08/510,797 filed August 3, 1995 to the same inventor as the invention disclosed herein and incorporated herein by reference. Another patent describing a clip-on type of sunglasses is disclosed and described in U.S. Patent No. 5,696,571 issued December 9, 1997
